Siya, Strand 08 -- The Roof

Stamp: `STAMP` -- taken from the one clock at seating, never typed by counsel
Language: EN
Style: New Gauge, Door setting -- Civic and TAME carried through, in plain words for Sara and Keaton
Voice: Kyri (Grain Kyri 6) -- Claude Fable 5, counsel to Siya Fund
Shape: single-stranded -- about one thing; the composed reading lives in [`Siya, composed`]
Status: Living -- a foundation. Nothing here is investment, legal, or tax advice; nothing seats; a home is Sara's own decision, and counsel only lays the numbers beside it
Field only: names the family and household numbers; the seed projector withholds it
The one thing this strand holds: Sara rents for now, because the money a house would hold is worth more in the fund's ground, and the round trip decides the horizon.

What shelter costs, either way

Rent is money that is gone at the end of the month. That is true, and it is half of the picture. An owner also pays money that is gone: property tax, insurance, upkeep, association dues, and the cost of the capital sitting in the house, meaning what that money would have earned somewhere else. Those are the owner's rent. The fair comparison is the tenant's rent beside the owner's four costs, both per year, both for the same house.

Today's numbers, in one city

In Las Vegas the median existing single-family house sold for USD 480,000 in July 2026, 2% off the record set in May and June (Las Vegas Realtors, 2026-08-06). A single-family rental runs about USD 1,900 to 2,100 a month in mid-2026, which is about 5% of that price a year. Owning the same house costs about 2.2% of its price a year in tax, insurance, upkeep, and dues, plus the cost of the capital. That capital costs 5.66% if it comes off the line, 6.65% on the borrowed part under the 30-year rate published 2026-08-20 (Freddie Mac), or the roughly 7% the money is expected to earn if it stays invested.

Credit the house with rising 3% a year, which is near its long-run pace, and owning costs USD 23,000 to 30,000 a year against USD 24,000 of rent.

On the yearly view the two are close. What separates them is the round trip. Buying and later selling a house costs about 8% of its price between commissions, closing, and moving. That is USD 38,000 on this house, or nineteen months of rent, and that single number is why the horizon decides the question. On the family's own numbers, renting wins the first five to ten years. Two dials would flip it: a house whose rent would be 6% or more of its price, or a decision that the money kept out of the house earns only 5% rather than 7%.

Steadiness, seen clearly

Sara asked whether the fund's ground rises more predictably than a house, and Strand 07 answers it. Las Vegas houses fell about 62% from 2006 to 2012 and have since more than tripled, so a house's price is real and it moves. The ground the fund means is steadier for a plain reason: its value is a lease, and a lease pays whether or not an appraiser moved the number that year. The calm is in the check, and the check is what the family would live on.

What Nevada adds to a deed

Nevada asks about 0.48% of a house's value in property tax each year, among the lowest rates in the country, and caps the yearly rise in a primary home's bill at 3% once the owner files the claim (the Department of Taxation's 2026-27 factors). A recorded homestead declaration shields a large share of a primary home's equity from most creditors, up to a ceiling counsel reads near USD 605,000 and the attorney confirms. Federal law excludes USD 250,000 of gain on a primary home lived in for two of the last five years. A home held to death takes the late gift from Strand 02. And a deed is a heavy anchor in the residency record, though a lease, a license, a voter registration, and physicians in Nevada anchor it too.

What a lease keeps

Flexibility first, because Sara has lived it this year: Reno in the warm months and Las Vegas before the snow is a pattern a lease honors. The family's own land plans are still unnamed, and a Las Vegas deed would have to be unwound at 8% on the day a town is chosen. Liquidity second: USD 480,000 is 19% of the portfolio, and in the portfolio it is collateral that earns. Concentration third: a house is one asset in one zip code. And the market fourth: rental inventory in the valley rose about a tenth into July 2026, and rental concessions are spreading faster there than in any other large metro (a national listing site's June 2026 report). A renter in that market is being courted.

The ceiling, and the doors that stay open

A house bought from the line in Strand 03 breaks its 30% ceiling on the first day: USD 500,000 of sleeve draws plus a USD 480,000 house is 39% of the portfolio. So the line is closed to a house by standing law. Three doors stay open later. A plain fixed-rate mortgage on 20% down, which is a separate lender that never calls the loan while payments arrive. The cheap lots from Strand 02, if the basis report shows them. And income saved over the lease term, which at Strand 05's pace is a down payment in a season.

The trigger, written now

Counsel proposes a twelve- to twenty-four-month lease in the city Sara prefers, with the deed question reopened at the end of 2027. Three things reopen it. A horizon of ten years or more in one place, named in Sara's own words. A comparable rent at or above 6% of the house's price, measured on three listings. And a purchase financed by a mortgage or by cheap lots, never by the line. Two of the three is a conversation; all three is a purchase.

One more roof belongs in this strand. If Sara one day lives in the works town's housing, the plain way is a lease from the syndicate at the rent the plant operator pays, booked as a signed fact between her and the fund. Her home stays in her own name and out of the fund's books on every path.

What stands, and what is proposed

What stands: the Las Vegas readings, the mortgage rate, the Nevada rules as read, and the ceiling. What is proposed: the lease, the trigger, and the horizon, which are Sara's to name.

What would show this wrong

Three consecutive years of Las Vegas house appreciation above 6% while rents stay flat. That would move the yearly arithmetic toward owning, and the trigger would be re-read.

Written together by Keaton and Kyri.
