

# Siya, Strand 07 -- The Ground We Mean

**Stamp:** STAMP -- taken from the one clock at seating, never typed by counsel

**Language:** EN

**Style:** New Gauge, Door setting -- Civic and TAME carried through, in plain words for Sara and Keaton

**Voice:** Kyri (Grain Kyri 6) -- Claude Fable 5, counsel to Siya Fund

**Shape:** single-stranded -- about one thing; the composed reading lives in [Siya,](#)  
[composed](#)

**Status:** Living -- a foundation. Nothing here is investment, legal, or tax advice; nothing seats; every money move waits behind the gates in Strand 10 and the licensed team

**Field only:** names the family and household numbers; the seed projector withholds it

**The one thing this strand holds:** the real estate Siya means is ground under a lease to a durable tenant, and its value is the lease.

---

## Six things, named

When this family says real estate, it means six things the sleeve memos have already written down. A mill's ground and roof, where plant fibre is separated from its stalk. A bale barn beside it. Acres irrigated with reclaimed water and leased to an ecological grower who farms without animal inputs, in the way Helen Atthowe teaches. Workforce housing in a working town of about twenty thousand people, where the town itself has said housing is its first need. A downtown building inside a reinvestment zone, holding the receipts office and a market hall. And a receipts services agreement with a city, under which the family delivers a daily reading the city can trust.

None of that is an office tower or an apartment block. So when the family asks how steady such property is, the honest comparison is with the nearest public series for each thing, and this strand carries those.

## What the nearest series say

US cropland reached USD 5,830 an acre in 2025, up 4.7% for its fifth consecutive rise, and cropland rents rose 0.6% to USD 161 an acre (USDA, 2025-08-01). Industrial property

sat 11% under its 2022 peak in June 2026, against 34% for office and 19% for apartments; strip retail sat 2% under its all-time high, and data centers 9% under (Green Street, 2026). A works town's housing has no index of its own, and the nearest series, institutional apartments, is a poor fit. A city contract has no series at all, because its value moves with the city's judgment rather than with interest rates.

Two cautions belong beside the record. Farmland's calm is partly the yearly survey that smooths it, the way an annual weigh-in smooths a diet, and the institutional farmland index posted a rare negative year in 2024 at -1.03% (a manager's review, December 2025). And the 1980s teach the harder lesson: when interest rates and crop prices turned together, cropland fell by about a quarter nationally and by about three fifths in the Corn Belt over six years (counsel's knowledge, unfetched), and families who had borrowed against it lost the land. That is why the family's own debt on any property stays modest and fixed.

## **A lease is the thing**

The fiber sleeve memo wrote the whole valuation model in one line. The mill's property is worth its lease, the lease is worth its tenant, and the tenant is worth its receivables. Every one of the six things above is read the same way. So the family's real work is reading the tenant's books rather than any index, and the family's own bookkeeping, one set of books per entity in Dimeroll, is that reading surface. The five screens from Strand 02 apply to tenants too: how much of the revenue is public money, how durable it is, wages over rents, local circulation, and ahimsa.

## **Destiny, read by hand**

Keaton's phrase was that the family's destiny is more in its own control on this ground than in a house, and the phrase is true by degrees, depending on which hand the family holds.

A limited partner in someone else's deal controls four things once, at the door: the sponsor, the deal, the debt, and the size. After the wire, the destiny is the sponsor's. A sponsor of the family's own syndicate controls the property, the tenant, the debt, the timing of any sale, and the reporting, and owes a duty to the other partners. An operator of the business on the property controls the product, the contract, the crew, and the books, and is rewarded by earnings.

The works town sleeve already puts the family in the sponsor's chair: the syndicate holds the receipt and the lease, and the plant stays the city's. In that chair the control is real. It arrives with three bills. Concentration, because a works town is one county, one river, one council. Illiquidity, because a syndicate's interest sells slowly and a town takes a decade. Execution, because an operator's return is earned by showing up for ten years. The way this family builds anything says how to carry those bills: grow the second town from a working first one, and the first town from a working lease.

## **What stands, and what is proposed**

What stands: the six things named, the public readings dated above, and the sponsor's chair the sleeve memo describes. What is proposed: every specific property, sponsor, and town, which wait on the shapes the tree already keeps for reading them, on the gates, and on Keaton's word.

## **What would show this wrong**

A lease that lapses. On the day a tenant leaves, the ground goes back to being priced by the index, and the calm this strand describes goes with the tenant.

*Written together by Keaton and Kyri.*
