

Siya, Composed -- The Fund in One Reading

Stamp: STAMP -- taken from the one clock at seating, never typed by counsel

Language: EN

Style: New Gauge, Door setting -- Civic (name what the reward measures) and TAME (bound every claim, say why), in plain words for Sara and Keaton

Voice: Kyri (Grain Kyri 6) -- Claude Fable 5, counsel to Siya Fund

Shape: composed, never braided -- ten single-stranded foundations laid side by side, each named once, each still its own; draw any one out and it reads alone

Status: Living -- the front door to the set. Nothing here is investment, legal, or tax advice; nothing seats; every money move waits behind the five gates in Strand 10 and the licensed team

Field only: names the family and household numbers; the seed projector withholds it

Grows from: this week's three memos on the loan, the roof, and the sectors, and the elder counsel session of 20260810 ; every number below is dated there and carried here unchanged

The strands: [01 what the fund is for](#) - [02 the portfolio](#) - [03 the loan beside the portfolio](#) - [04 the four sleeves](#) - [05 the engine](#) - [06 the first check](#) - [07 the ground we mean](#) - [08 the roof](#) - [09 the glass ledger and the ladder](#) - [10 the gates and the words](#)

Why ten strands and one cloth

A person holds a few things in mind at once. So this set was written the way the family builds software: each foundation is about one thing, stands free, and can be drawn out and read alone. This page is the cloth those strands make when they lie side by side. It tells the whole story once, slowly, and names each strand exactly where the story needs it. The strands hold the numbers; this page holds the shape.

The story, told once

A family sits at a table with a basket. In it are about USD 2.5 million of shares in listed companies, an income of about USD 65,000 a month before federal tax, and a purpose the family has already written in its own words: to give, to do no harm, and to live by the

ethic it keeps at its table. Siya is the basket's name. Sara is its chief executive and Keaton is its founder and finance officer, and they decide together. Strand 01 holds the one thing everything else is measured against: *the fund exists to turn the family's money into good the family can prove*. The vessel, a Nevada company or a Wyoming public-benefit company, is a named gap that the attorney reads and Keaton's word seats.

The shares are the foundation, and they are worth more kept than sold. A share is a slice of a business, rewarded by that business's earnings and by the next buyer's price. Selling one turns a paper gain into a taxed one, at 15% to 20% plus 3.8% federally, and California may reach any 2026 sale for a member it can still claim, which is why Sara's move to Nevada on 2026-06-29 makes this a year to borrow rather than sell. Shares held for a lifetime reset their basis at death, so a gain deferred long enough is never taxed at all. Strand 02 holds that, and it names the first document to pull before anything else: the lot-level basis report, because shares bought near today's prices sell at a 1% to 3% cost, cheaper than any loan.

So the family borrows shallowly rather than selling. A lender lets the family draw cash against shares it keeps, at the overnight benchmark plus a spread, and the benchmark stood at 3.66% on 2026-08-25. The cheapest published rate on a USD 600,000 draw is about 4.71% at a discount broker's margin desk, and the custodian's own line prices between 5.2% and 6.7% depending on what is negotiated. The honest test is plain: borrowing wins in every year the kept shares earn more than the loan costs, and the tax saved is the cushion for the years they do not. Strand 03 holds the depth, and the depth is the safety: an opening draw at or under 25%, which is USD 625,000, a ceiling of 30%, and a call plan written before the first dollar moves, because at that depth the shares can fall by half before any lender asks for money.

The borrowed money goes into three pockets beside the first. Four sleeves, because four rewards: public markets for daily price and dividends, real estate for cash yield and preservation, venture for a few large outcomes over many tries, and private business for earnings and control. After the loan the basket reads about 80% public and 10, 5, and 5 for the other three, which is Keaton's arithmetic and the arithmetic. Strand 04 holds why the four-part shape the family's investing community teaches, 30, 30, 20, and 20, is a destination rather than a first step: reaching it by borrowing alone would take USD 5.83 million against USD 2.5 million, which no lender offers and no safety bound survives.

The engine that walks the rest of the way is the monthly income. After federal tax, which runs 18% to 33% depending on what kind of income it is, and after living costs of

USD 8,000 to 12,000 a month, about USD 31,000 to 45,000 a month remains to deploy. At the midpoint, USD 450,000 a year, the basket reaches half public and half private in about six years. Strand 05 holds the trajectory and the policy: a named deal on the day it reaches its gates, and the line paid down between deals, so the loan is a parking lot rather than a permanent floor. It also holds the one state-tax flag, stated once: Keaton reads 2026 as a Nevada year, the elder session read a California part-year for the months before the move, and the attorney decides.

The first check goes to a friend's company, as ownership. DJINN's company, USD 100,000, which is 4% of the portfolio and inside the two laws the elder session seated: at most 5% in one company, at most 10% across all venture checks. Ownership rather than a loan, because a small company's shares can carry a federal tax gift that makes the gain tax-free after a holding period, and a loan misses it entirely. Strand 06 holds the papering: his own lawyer at the table, terms a stranger would sign, and the three hats of investor, customer, and spokesperson each documented on their own.

The ground the family means is ground under a lease. A mill's ground and roof for plant fibre, a bale barn, reclaimed-water acres leased to an ecological grower, workforce housing in a working town, a downtown building in a reinvestment zone, and a receipts contract with a city. Their nearest public series held far better than office towers and apartment blocks through the last repricing: cropland up 4.7% in 2025 to a record, industrial 11% under its 2022 peak against 34% for office. Strand 07 holds the model in one line, the property is worth its lease, the lease is worth its tenant, and the tenant is worth its receivables, and it reads control by hand: spent at the door as a limited partner, real in the sponsor's chair the family already sits in, and arriving with three bills, concentration, illiquidity, and execution.

Sara's own roof is a lease, for now. A tenant's rent set beside an owner's four costs, tax, insurance, upkeep, and the cost of the capital, comes out close on a yearly view in Las Vegas today: about USD 24,000 of rent against USD 23,000 to 30,000 of owning on a USD 480,000 house, once the house is credited with rising 3% a year. The round trip of buying and selling, about 8% or nineteen months of rent, is what tips the first five to ten years to renting. Strand 08 holds the trigger that reopens the question at the end of 2027: ten years in one place in Sara's own words, a comparable rent at or above 6% of the price, and a purchase financed by a mortgage or cheap lots, never by the line. If she one day lives in the works town, it is by a lease from the syndicate at the operator's rent, with her home in her own name on every path.

The deals can give the family's software its first users, and only strangers can give it proof. The glass ledger, where a deal's three sets of books and its receipts fold open for any co-investor, is the first product, and the family's own deal is its first deployment. Revenue from a company the family funds is money the family paid itself, and a seed investor discounts it toward zero. Strand 09 holds the ladder: the family's own deal, then its co-investors, then a sponsor the family has never met paying at arm's length, then ten paying strangers still paying a year later. The three firms Keaton named write checks of USD 1.75 million to 10 million into products at the top of that ladder, and consulting is the door through which the family learns which house to build.

And every dollar waits behind five gates. Securities counsel, the fee-only fiduciary and the policy statement, the public-benefit charter, one set of books per company, and Keaton's word, in that order. Strand 10 holds the gates, the stop-and-park triggers, the licensed team, and the words this house keeps: one clock, measurement over memory, witness before narrative, reds owned the day they are found, gaps named rather than guessed, accrete rather than break, own words with teachers thanked.

The fund on one page

Reading	Value	Date and source
listed shares	about USD 2.5 million	this summer, the custodian's statement (the family's figure)
monthly income before federal tax	about USD 65,000	Keaton, 2026-08-27
deployable surplus	USD 31,000 to 45,000 a month	Strand 05, counsel's arithmetic on two tax readings
overnight benchmark	3.66%	New York Fed, 2026-08-25
cheapest published line	4.71% blended on USD 600,000	a discount broker's table, read 2026-08-27
custodian's line	5.2% to 6.7% negotiated	aggregator range, May 2026, until a written quote replaces it
opening draw and ceiling	at or under 25% (USD 625,000); 30%	Strand 03, counsel's proposal

Reading	Value	Date and source
shape after the loan	80 / 10 / 5 / 5	Keaton's arithmetic, 2026-08-27
half public, half private	about year six	Strand 05, at USD 450,000 a year and 6% returns
first venture check	USD 100,000, 4% of the portfolio	inside the 5% and 10% laws
30-year mortgage rate	6.65%	Freddie Mac, 2026-08-20
Las Vegas median house	USD 480,000	Las Vegas Realtors, July 2026
Las Vegas single-family rent	USD 1,900 to 2,100 a month	mid-2026 range, a local manager and a rent aggregator
cropland	USD 5,830 an acre, +4.7%	USDA, 2025-08-01
industrial property	11% under its 2022 peak	Green Street, June 2026

The next twelve months, as a calendar

This autumn. Sara names her city and signs a lease of twelve to twenty-four months. The custodian sends the lot-level basis report and confirms the account title. The custodian's advisor is asked, with the 4.71% reading in hand, for a written quote at the benchmark plus 2.0% or better and a written answer on private placements. The tax attorney receives the character of the income, the part-year question, the vessel question, and the estate plan in one sitting.

This winter. The vessel is seated on Keaton's word and funded before any check. The first venture check goes out as ownership, on paper DJINN's own lawyer has read, and is repaid to the line from income inside ninety days.

Next year. The first real-estate deal reaches its gates and closes, with the family in the sponsor's chair and the property's debt modest and fixed. Its glass ledger runs for its

own co-investors, which is the ladder's first rung. The surplus deploys to named deals and parks in the line between them.

The end of 2027. The roof question reopens with three things in hand: the 2026 return filed, the first distributions received, and a place named for the family's own land. The ladder's third rung, a sponsor the family has never met paying at arm's length, is the reading that says whether the software has a market.

What stands, and what is proposed

What stands across the set: the shares, the income, the purpose, the dated market readings, the two venture laws, the five gates, and the words. What is proposed across the set: the vessel, keeping rather than selling, the depth and lender, the sleeve split, the deploy-then-park policy, the equity shape of the first check, every property and town, Sara's lease and trigger, the ladder, and the standing list. Each proposal names the person whose reading or word it waits on.

The gaps, gathered

Nine gaps recur across the strands and gate the next step. The lot-level basis report. The account title. Whether the pool is many names or a few. The character of Sara's income. The 2026 residency file. The vessel. The custodian's written quote and its private-placement answer. The estate plan's reading of the late gift. And the family's land plans, which decide Sara's horizon more than any market does.

Gratitude

The four-part portfolio is siloed from Braiden Shaw and the Growth Circle community. The tenant's-rent-beside-the-owner's-costs comparison is siloed from Ben Felix. The three words the family ships by are siloed from Jason Cohen. The ecological farming that names the ground is siloed from Helen Atthowe. The parts-that-stand-free idea that shaped this set is the family's own, written down on 20260823.204456 . The custodians, the statisticians, and the reporters cited by date taught their own numbers by publishing them. Nothing of theirs is reproduced here, and each is thanked in their own name.

May the basket keep its purpose in view as it grows. May every dollar that moves leave a receipt a stranger could read. And may Sara and Keaton hold the whole of it in one quiet mind, and so change it, and trust it, for as long as the work endures.

Written together by Keaton and Kyri.
