

The Live-Work Question -- whether a syndication can hold live-work mixed-use property, read for Georgia and five states under an ecology lens and a rail lens

Stamp: STAMP -- to be taken from the one clock at seating, never typed by counsel

Language: EN

Style: New Gauge, Field setting -- Civic (name what the reward measures) and TAME (bound every claim, say why) carried through (see [../context/GAUGE_STYLE.md](#))

Voice: Kyri

Status: Mixed -- design. A reading of law and public records as of 2026-09-06, with counsel's own ranking under two lenses Keaton named. Nothing here is investment, legal, or tax advice; nothing seats; every money move waits behind the sleeve's five gates and the licensed team. Counsel holds no license and no stake

Scrub note: this memo names the fund's thesis and no household numbers; it can travel to the public tree after Keaton's scrub

Basis: Atlanta's current zoning code (Part 16, Chapter 33, the LW district) and reporting on the ATL Zoning 2.0 rewrite dated January to May 2026; Georgia's 2026 session as reported by an affordable-housing intermediary (May 2026), a housing-policy institute (June 2026), and the Governor's office (2026-05-11); Washington's Governor's office (2026-03-27) and property-management readings of the 2025 rent law (2026); Texas law-firm briefings on S.B. 840 (2025); Florida law-firm summaries of the 2025 amendments to the Live Local Act (June and July 2025); Oregon's land-use department overview and city implementation pages (2024 to 2026); Colorado's legislature page for HB24-1313 and a law-firm timeline (2024); the Georgia Department of Community Affairs on Rural Zones (2025-12-05); an encyclopedia entry on MARTA's 2025 ridership. Statutory citations without a fetched source are marked as counsel's knowledge

Kin: [the works town shape](#) - [the works town sleeve](#) - [the fiber sleeve](#) - [the sectors we meant](#) - [Civic Style](#)

The reading, first

Yes. The same syndication holds a live-work building the way it holds a mill. The offering law is indifferent to what the property is. A private placement under Regulation D, a sponsor with a promote, limited partners with a preferred return, and an exemption from the fund-registration rules for real estate holders read the same whether the asset is a bale barn or a building where a weaver lives above her loom. What changes is the property's law, and five things change with it: the zoning and building code that let a person live and work in one unit, the tenant law that governs the residential half, the lender's limits on how much of a building may be commercial, the depreciation rule that turns on the

residential share of the rent, and the insurance and management the mix demands. Section 1 names each.

Georgia already has the zoning. Atlanta's current code carries a Live-Work district of its own, Chapter 33 of the zoning ordinance, written for exactly this building type, and the citywide rewrite now moving toward council keeps mixed use at its center. The state itself stays out of zoning: a 2026 bill to let small backyard homes bypass local zoning passed the House and died in the Senate, and a housing-density bill went nowhere, so a Georgia live-work deal is a local deal, made town by town. That cuts both ways, and section 2 reads both edges.

Under the rail lens, Texas, Washington, and Colorado lead; under the ecology lens, Oregon, Washington, and Georgia lead; Washington is the one state on both lists. Texas made mixed-use residential a by-right use on every commercial parcel in its big cities as of 2025-09-01. Washington did the same for every city over 30,000 people as of 2026-06-11, with no state income tax and fifty years of growth-management law behind it, and its one structural cost is a rent cap that the family's own rent screen already sits under. Georgia reads mid-table on both lenses and holds one instrument no other state in this set offers: a Rural Zone credit that pays 25% of a downtown building's purchase price and 30% of its rehabilitation, against Georgia tax the fund would owe anyway, on the condition that the building creates jobs. That condition is the works town shape written into a tax code.

Counsel's lean, held until Keaton's word: **read Washington and Georgia first, for opposite reasons.** Washington because its law and its ecology both point the way the family already faces, and a Wenatchee study already sits in the tree. Georgia because its small-town credit rewards the family's exact building, and because its tenant law and tax rates keep a syndicate's cash yield honest. Texas stays the rail leader and the Brazos study stays where it is; Oregon is the ecology teacher whose tax and rent law ask a price; Florida's by-right law is the strongest in the country and sits on the most fragile ground in it; Colorado's rail law lands its deadlines this December and its water is the falsifier the statute itself names.

1. What a syndication is indifferent to, and what it is sensitive to

Indifferent. The offering. A private placement is sold under a federal rule to accredited investors, the sponsor files a notice with the federal regulator and with each state where an investor lives, and the fund holding the property is exempt from investment-company registration because it holds real estate. Investor states decide the notice filings; the property's state decides everything below. Nevada, where the family now lives, is the investor state for the family's own checks.

Sensitive, one. Zoning and code. A live-work unit is a legal category, and the national building code has carried a section for it since 2009: a unit where the resident works, capped in floor area, with the work share held to half the unit and a small number of outside employees, with sprinklers and access rules attached (counsel's knowledge of the model code, unfetched; each state adopts its own edition and amendments). Zoning decides where such a unit may stand, and that is local nearly everywhere. A state can only widen the local door, which four of the six states below have done.

Sensitive, two. Tenant law. The moment a person sleeps in a unit, the residential landlord-tenant statute of that state governs that unit, whatever the lease calls it. Rent caps, notice periods, deposit limits, and eviction timelines therefore reach into a live-work building in a way they never reach a bale barn. A sponsor who underwrites rent growth above a state's cap has underwritten a fight; a sponsor whose rents already sit under it is indifferent to the cap.

Sensitive, three. The lender. Agency multifamily lenders limit how much of a building may be commercial, on counsel's reading of their guides near a third of the floor area and a fifth of the income (unfetched). Past that, the building borrows as commercial property, at commercial terms. A live-work building whose work share is small borrows cheaply; one whose work share is large borrows like a shopping center.

Sensitive, four. Depreciation. Federal law depreciates a building over 27.5 years when at least 80% of its gross rents come from dwelling units, and over 39 years otherwise (counsel's knowledge of the code, unfetched). Where the line falls in a live-work building depends on how the leases split the rent, which is a drafting decision made before closing rather than a fact discovered after.

Sensitive, five. Management and insurance. A building that houses people and machines wants a commercial package policy and a manager who knows both a residential lease and a commercial one. The five screens the sleeve memos already apply to tenants apply here twice, once to the resident and once to the business.

2. Georgia, read in full

Zoning. Atlanta's zoning ordinance carries a Live-Work district, Chapter 33 of Part 16, with public-space rules scaled to lot size: a tenth of the net lot on parcels of half an acre or less and a fifth above that (the city's code, current). The district exists now; a live-work building in it needs a permit rather than a rezoning. The citywide rewrite, ATL Zoning 2.0, released its second draft on 2025-12-19, closed comment on 2026-04-08, and planned council consideration in spring or early summer 2026 (a business-association summary, January 2026); a May 2026 report said the planning department was preparing a third draft for adoption, with density advocates unhappy that single-family zoning stays largely untouched. Whether council has adopted the code as of today is a gap this session did not fetch. Outside Atlanta, every Georgia city zones for itself under the state's Zoning Procedures Law, which sets hearing and notice rules for any rezoning (counsel's knowledge, unfetched).

What the state did and did not do in 2026. The session ended in early April and the Governor's signing window closed 2026-05-12. A bill to let homes of 400 square feet or less bypass local zoning, HB 1166, passed the House 111 to 50 and died in the Senate (a housing-policy institute, June 2026). A housing-density bill did not move. A bill letting owners sue local governments over unenforced nuisance laws, HB 295, was signed 2026-05-12 (an affordable-housing intermediary, May 2026). So Georgia in 2026 is a local-control state with a landlord-leaning legislature, and a live-work deal here is negotiated with a mayor rather than granted by a statute.

Tenant law. Georgia bars its cities and counties from rent control by statute (counsel's knowledge of the code, unfetched). Its 2024 Safe at Home Act set the state's first statutory habitability duty, capped security deposits at two months' rent, and required three business days' written notice before an eviction filing (a realtors' association summary; the act's 2024 date is counsel's knowledge). Dispossessory cases move quickly by national standards. Read the Civic way: Georgia's tenant law rewards the landlord's cash yield and asks in return only that the building be habitable and the notice be given.

Tax, for a Nevada-resident limited partner. Georgia taxes income earned in Georgia whoever earns it. The flat rate fell to 4.99% for 2026 under HB 463, signed 2026-05-11 and retroactive to 2026-01-01, with scheduled cuts of 0.125 points a year toward 3.99% if revenue targets are met (the Governor's office; a national accounting firm, June 2026). Distributions to nonresident members of a pass-through carry a 4% withholding that the member reclaims on a Georgia return (counsel's knowledge, unfetched). Property tax runs near 0.9% of value on average, higher in Fulton County (counsel's knowledge, unfetched). The SB 33 homestead cap signed 2026-05-11 protects owner-occupied homes only and touches a syndicate's building in no way.

The Rural Zone credit. Georgia designates up to ten small historic downtowns a year as Rural Zones for five years each; seven began 2026-01-01 and run through 2030-12-31 (the Department of Community Affairs, 2025-12-05). Inside a zone, a job credit pays USD 2,000 a year for each new full-time job for up to five years, capped at USD 40,000 a year and USD 200,000 in all; an investment credit pays 25% of a downtown property's purchase price, capped at USD 125,000; and a rehabilitation credit pays 30% of qualifying rehabilitation cost, capped at USD 150,000 (the department's 2024 and 2025 releases). The credits stack, none is available without the job element, and the program excludes other state credits on the same project (the department's program page). Read the Civic way: the credit rewards a buyer who buys a downtown building, fixes it, and puts people to work in it, which is the works town sleeve's building before the family drew it. The credit offsets Georgia income tax, so it is worth most to an investor who owes Georgia tax, which a nonresident partner in a Georgia syndicate does.

Rail. MARTA runs the only heavy-rail system in the Southeast outside Washington and Miami, and the whole system carried about 65.8 million rides in 2025, near 240,000 a weekday in early 2026 (an encyclopedia entry citing the agency). A 2016 sales tax funded a 29-mile light-rail and bus-rapid-transit expansion that has moved slowly and been cut back (the same entry). Amtrak's Crescent stops in Atlanta, Gainesville, and Toccoa, and the coastal trains stop in Savannah and Jesup (counsel's knowledge, unfetched). Under the rail lens, Georgia is one metro with a real system and no commuter rail.

Ecology. Georgia offers a conservation-use covenant that taxes farm and forest land at its use value for a ten-year term rather than its market value, and a state hemp program since 2019 (counsel's knowledge, unfetched). Water is abundant in the Piedmont and the Coastal Plain and contested at the state line, where a three-state dispute over the Chattahoochee ran two decades. The state has no statewide land-use planning act and no growth boundaries. Under the ecology lens, Georgia rewards a covenant on farmland and a job in a small downtown, and asks the buyer to bring the plan.

What Georgia rewards, in one line. Cash yield, fast enforcement, a low and falling income tax, and a credit for reviving a small downtown, in exchange for doing the zoning yourself.

3. Five states beside it

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Georgia	Atlanta LW district now; Zoning 2.0 pending; state preemption absent (2026)	rent control barred; deposits capped at two months; three-day notice; fast dispossessionary	4.99% (2026), 4% nonresident withholding; property tax near 0.9%	MARTA heavy rail; Amtrak; no commuter rail	conservation-use covenants; hemp; abundant water; no planning act	cash yield and a small-downtown credit

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Texas	S.B. 840 (effective 2025-09-01): mixed-use residential with at least 65% residential floor area by right on office, commercial, retail, warehouse, and mixed-use zones in cities over 150,000 in counties over 300,000; density at least 36 an acre, height at least 45 feet, one parking space a unit at most, administrative approval, private right of action with fee shifting (law-firm briefings, 2025)	rent control barred outside emergencies (counsel's knowledge)	no income tax; franchise tax above a revenue threshold; property tax among the highest, near 1.6% (counsel's knowledge)	DART, the largest light-rail network in the country; Houston and Austin rail; Amtrak	minimal planning; water stress on the plains; the Brazos study already in the tree	speed and yield in six big cities

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Florida	Live Local Act (2023, amended 2024 and 2025-07-01): multifamily and mixed-use with at least 65% residential by right on commercial, industrial, and mixed-use zones, when at least 40% of units are affordable to households up to 120% of area median income for 30 years; height, density, and floor-area floors set to the highest allowed; a 75% or 100% property tax exemption for the affordable units (law-firm summaries, 2025)	local tenant ordinances preempted (2023); rent control barred (counsel's knowledge)	no income tax; no state notice filing for private placements (counsel's knowledge); property tax near 0.9%	Brightline intercity since 2023; SunRail; Tri-Rail; Miami Metrorail	fragile: hurricanes, sea level, an insurance market in crisis since 2023	affordability, by statute, in exchange for by-right density

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Washington	SB 6026 (signed 2026-03-27, effective 2026-06-11): cities and counties over 30,000 must allow housing in commercial and mixed-use zones, and may require ground-floor commercial on at most 40% of such acreage; middle-housing law (2023) and a 2025 law lifting density near rail and bus-rapid-transit stations (the last is counsel's knowledge)	HB 1217 (signed 2025-05-07): annual increases capped at the lower of 7% plus inflation or 10%, 9.683% for 2026; buildings under twelve years old exempt; 90 days' notice; rent held for the first year of a tenancy (property-management readings, 2026)	no income tax; business-and-occupation tax with real estate rentals exempt; a 7% capital-gains excise with a real-estate exemption whose reach into entity sales is a gap; property tax near 0.9%	Link light rail, extended north and east in 2024 and 2025; Sounder commuter rail; Amtrak Cascades	Growth Management Act since 1990; urban growth areas; hemp; the Wenatchee vineyard study in the tree	housing near jobs and rail, at a capped rent growth

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Oregon	Climate-Friendly and Equitable Communities rules (2022): the eight metro regions must designate mixed-use Climate-Friendly Areas sized to hold about 30% of housing need, drop parking minimums, and wire 40% of new parking for electric vehicles; most adoptions due by December 2026 (the land-use department; Eugene's implementation page)	rent cap at the lower of 7% plus inflation or 10%, 9.5% for 2026; buildings under fifteen years exempt; just-cause eviction after the first year; Portland adds a relocation-payment trigger (property-management readings, 2026)	income tax up to 9.9% on Oregon-source income (counsel's knowledge); no sales tax; property tax near 0.9%	MAX light rail; WES; streetcar; Amtrak Cascades	fifty years of statewide land-use planning, growth boundaries, and exclusive farm-use zoning; hemp	walkable mixed use and protected farmland, at the highest tax and the tightest rent law in the set

State	Live-work and mixed-use enablement	Tenant law	Tax for a Nevada-resident partner	Rail	Ecology	What its law rewards
Colorado	HB24-1313: about 31 Front Range jurisdictions must meet a housing-opportunity goal near rail and frequent bus, with final reports due 2026-12-31 and certification by 2027-12-31, funded by grants and gated by them; parking minimums and accessory-unit laws effective 2025-07-01; HB26-1001 (signed March 2026) opens nonprofit, school, and transit-owned land to housing by 2028	rent control barred by statute (counsel's knowledge); for-cause eviction since 2024 (HB24-1098)	4.4% flat (counsel's knowledge); property tax low on homes and about four times higher per dollar on commercial space, so a mixed-use building is assessed in two parts	RTD light and commuter rail across the Denver region	water law by prior appropriation; the TOD statute itself lets a community shrink its goal for insufficient water	density near transit, with the state's own water clause as the brake

4. The rail lens, ranked

Texas first. S.B. 840 removed the rezoning step entirely for the building this question describes, in the six or so cities that hold most of the state's rail, and it did so with an administrative-approval mandate and a lawsuit for any city that stalls. No income tax reaches a Nevada partner. The price is a property tax near double Georgia's and a water table the plains keep drawing down. The reward, read plainly, is speed.

Washington second. SB 6026 does for every city over 30,000 what Texas did for its largest, which matters for a family whose towns are small; the middle-housing and station-area laws stack on top; Link is the fastest-growing rail system in the West; and no income tax reaches the partner. The rent cap is the structural cost, and it binds a sponsor who needs rent growth above 7% a year. The works town sleeve already refuses that sponsor.

Colorado third. The rail law's deadlines land this December, which means the zoning it promises is being written now and the grant money follows certification next year. Rent control is barred and eviction needs a cause. The water clause in the statute is the honest brake, and Denver's commercial assessment ratio means the work half of a live-work building carries the tax.

Florida fourth. The strongest by-right statute in the country, and the only one that pays the sponsor for affordability with a property tax exemption. Brightline is real intercity rail. The ground is the problem: an insurance market that has been in crisis for three years and a coastline the underwriters price by the decade.

Georgia fifth. One metro with a heavy-rail system, a live-work district already on the books, and a rewrite that keeps mixed use central, but no state statute that opens a door a city has closed, and an expansion program that has moved slowly for a decade.

Oregon sixth on rail alone, because MAX is mature rather than growing and the tax and rent law ask the most, even though its planning rules produce the walkable districts a live-work building wants.

5. The ecology lens, ranked

Oregon first. Nobody else has fifty years of statewide land-use planning, growth boundaries that hold, and farm zoning that keeps a field a field. The 2022 rules add the mixed-use centers by mandate and strip the parking that would otherwise pave them. The family's grower and mill would sit on protected ground. The price is the 9.9% income tax on every Oregon dollar and a rent cap of 9.5% for 2026, and the rent cap is the smaller of the two for a sponsor whose rents already sit low.

Washington second. The Growth Management Act is Oregon's younger sibling, urban growth areas hold the line around each city, hemp grows on both sides of the Cascades, and the tree already carries a Wenatchee study. No income tax. The rent cap is the same shape as Oregon's, with a twelve-year exemption for new buildings.

Georgia third. Abundant water, a conservation covenant that taxes farmland at use value, a hemp program, and a credit that pays a quarter of a downtown building and nearly a third of its repair in exchange for jobs. No planning act, so the plan is the buyer's, and the state line is where the water fights happen.

Colorado fourth, for its transferable conservation-easement credit and its mountains, against water so scarce that the state's own housing law lets a town plead it.

Texas fifth, because the Brazos study already showed where water and fibre can meet on the plain, and because nothing in state law protects the ground around a mill from the next warehouse.

Florida sixth, for the ground itself.

6. What the family's own screens do to the ranking

Three of the family's standing rules move states in this table, and naming them is the point of reading law the Civic way.

The rent screen. The works town sleeve reads housing by *occupancy at a rent the plant operator and the farmhand can pay*. A sponsor who underwrites that rent is indifferent to a 7%-plus-inflation cap, because the cap binds only rent growth the sponsor never planned. So Washington's and Oregon's rent laws, which read as costs to most sponsors, read as near-zero costs to this one. And Florida's 40% affordability condition, which reads as a burden to most, reads as the family's own screen written into statute, with a property tax exemption attached.

The town screen. The works town shape ranks a town by headwater first, polis second, commons third, and it reads for towns of about twenty thousand. Texas's by-right law reaches only cities over 150,000; Washington's reaches every city over 30,000; Georgia's Rural Zone reaches downtowns of a few thousand. For the family's town size, Washington's statute and Georgia's credit are the two instruments that apply, and Texas's does not.

The lease screen. The fiber sleeve memo reads every property as worth its lease, its lease as worth its tenant, and its tenant as worth its receivables. A live-work building has two tenants in one unit, and the residential half is governed by the state. So the tenant law column is the lease column, and Georgia's fast enforcement and Colorado's for-cause rule sit at opposite ends of what a sponsor must underwrite.

Read with those three screens, **Washington rises to first overall, Georgia to second, and Texas falls to third** for a live-work building the family would sponsor itself. Under a pure rail lens without the screens, Texas stays first.

7. Projections

Atlanta adopts Zoning 2.0 with a live-work use carried forward. Horizon: the end of 2026.

Assumptions: the third draft reaches council by autumn and the mixed-use core survives the neighborhood-unit review. Falsifier: a council vote after 2027-03-31, or a code that drops the Live-Work district without a successor use. Confidence: likely.

At least one Colorado transit-oriented community misses its December deadline and loses grant

access. Horizon: 2027-12-31. Assumptions: the housing-opportunity reports due 2026-12-31 are complex and some councils resist. Falsifier: every qualifying jurisdiction certified by 2027-12-31.

Confidence: likely.

Washington's rent cap binds few sponsors at the family's rent levels through 2028. Horizon: three years. Assumptions: inflation stays under 3%, so the cap sits near 9.7% while a works-town rent grows

near 3%. Falsifier: two consecutive years of inflation above 5%, which pushes the cap to its 10% ceiling while costs rise faster. Confidence: likely.

Florida's insurance market stays the binding constraint on any live-work deal there. Horizon: to the end of 2028. Assumptions: two more hurricane seasons at recent frequency. Falsifier: three consecutive years of falling average premiums statewide. Confidence: plausible, and the projection the family can cheaply avoid testing.

Georgia designates another round of Rural Zones on 2027-01-01, and one of them sits on a rail line. Horizon: 2027-01-01. Assumptions: the program keeps its annual cadence of up to ten. Falsifier: no designation announced by 2026-12-31. Confidence: likely on the first clause, a live possibility on the second.

8. Base rates, before the story

State zoning preemption laws that passed between 2021 and 2026 took two to four years to show up as permits, because cities rewrite their codes slowly and developers wait for the first test case (counsel's knowledge, unfetched). Rent stabilization laws of the Oregon and Washington shape have bound a minority of landlords in any given year, because most rents rise under the cap in most years, and they bind hardest in the year after an inflation spike. Live-work buildings are a small share of any city's housing stock and lease more slowly than plain apartments, because the tenant must be two things at once. Small-town revitalization credits are used most by local owners and least by outside funds, because the job element is the hard part. And every state in this table has changed its housing law in the last three years, so a reading taken today is a reading with a two-year shelf life.

9. Structural and cyclical, sorted

Structural: the federal offering rules; the national code's live-work section; the 80% depreciation line; the lender's commercial-share limits; each state's rent-control statute or ban; Georgia's local-control tradition; Oregon's and Washington's planning acts; Colorado's assessment ratios; Florida's coastline. Cyclical: the 2026 rent-cap percentages; Georgia's income tax rate and its scheduled cuts; Colorado's December deadline; Atlanta's adoption date; Florida's insurance premiums; the pace of MARTA and Link extensions; the 2026 and 2027 legislative sessions, which will rewrite at least one row of the table.

What this refuses, and the named gaps

It picks no state, no city, no parcel, and no sponsor. It moves no money. It gives no legal opinion; a live-work deal in any of these states waits on that state's real estate counsel, on securities counsel for the offering, and on the tax attorney for the nonresident filings. **It ranks by law and public record only;** price, cap rate, and construction cost are a separate reading counsel has not taken.

Ten gaps are named rather than filled: whether Atlanta's council has adopted Zoning 2.0 as of today; the exact text of Georgia's nonresident withholding and rent-control statutes, cited here from knowledge; the current edition of the building code each state has adopted and its live-work

amendments; the agency lenders' current mixed-use limits; the reach of Washington's capital-gains excise into a sale of a syndicate interest; the number of Washington's 2025 station-area law; the companion Texas law on home-based businesses that passed with S.B. 840; Colorado's 2026 income tax rate after any temporary reduction; effective property tax rates on commercial and mixed-use property, which differ from the homeowner averages cited; and the state notice-filing fees for private placements, read here as low hundreds of dollars everywhere but Florida.

For the licensed team, in order

1. **Securities counsel.** Confirmation that a live-work asset changes nothing in the offering, and the notice filings by investor state.
2. **Real estate counsel in the chosen state.** The zoning of the specific parcel, the code edition and its live-work section, the lease drafting that sets the residential share, and the tenant statute as applied to a unit where someone both lives and works.
3. **The tax attorney.** The 80% depreciation test on the drafted leases, the nonresident state filings for Nevada partners, and the Rural Zone credit's use against Georgia tax.
4. **The fee-only fiduciary.** Whether a live-work building sits inside the real estate sleeve's bounds as the loan memo wrote them.

Gratitude

The four-sleeve reading is siloed from Braiden Shaw and the Growth Circle community. The lease line is the fiber sleeve memo's own. The state legislatures, the Georgia Department of Community Affairs, the Governors' offices of Georgia and Washington, and the law firms and property managers cited by date taught their own readings by publishing them. Nothing of theirs is reproduced here.

Next: Keaton's word on which lens the first live-work reading is taken under; if the ecology lens, the Wenatchee study reopened against SB 6026 and a Georgia Rural Zone town on a rail line read through the works town shape; if the rail lens, a Texas S.B. 840 parcel read through the same shape; and in every case, the parcel's zoning letter before any number.

Written together by Keaton and Kyri.
